DETAILED ACTION

Specification

1. The abstract of the disclosure is objected to because of the use of the word "invention" in lines 1,2 and 4. Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 112

2. Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential structural cooperative relationships of elements, such omission amounting to a gap between the necessary structural connections. See MPEP § 2172.01. The omitted structural cooperative relationships are: between the cam, arm, rod, cylinder, groove, slot and gear.

Allowable Subject Matter

3. Claim 1 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action.

The prior art teaches various types of gear control means but fails to teach the claimed cam plate with a first slot, first groove and shoulder means, and further having a hollow cylinder coil housing which slidably moves in the cam first groove. While the claim fails to interrelate all of the structural elements, the

Art Unit: 3676

relationship between the cam groove and housing cylinder is sufficiently delineated and defines over the prior art of record.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Not the various gear control mechanisms of the cited prior art including solenoid or motor control.
